# WHAT IS METABOLIC THERAPY?

**Metabolic therapy is a non-toxic cancer treatment based on the use of Vitamin B-17, proteolytic pancreatic enzymes, immuno-stimulants, and vitamin and mineral supplements.**

**Apricot seeds should be ground up in everything you eat. Anywhere up to 70 seeds per day. The FDA recommend not to ingest more than 6 seeds per hour because toxic reactions may occur, such as gastric upset, headache, vomiting and loose bowels. Many people take 15 seeds per day. Can skip a day and then take 40 the next day, and so on and so on. Bone cancer survivors take 5 seeds per waking hour with pancreatic enzymes, etc... ( I'm sure not e v e r y hour ). In general, take one apricot kernel for each 5 pound of body weight, daily. Example: 180 lb = 36 apricot seeds daily.**

**Dr. Krebs recommends 30 to 35 seeds per day as nutritional support for clinical cancer sufferers. To start, it is recommended that along with the purified forms of B-17, either intravenous or oral, cancer patients eat one apricot seed for every 10 lbs of body weight. If this dosage is tolerated well, it may be increased to 30 to 35 kernels per day.**

**If you are using the 500 mg tablets of Vitamin B17, the effect is magnified if you eat 5 - 7 apricot seeds with it because the other vitamins, minerals, and enzymes in the seeds complement the vitamin, thereby will help the actual vitamin B17 tablet assimilate into the body.**

**Shred these seeds and sprinkle them on hot vegetables, baked potatoes, soup, salads, cereals, and trail mix. Others, who do not mind the bitter taste of the seeds, prefer to eat them on their own. For optimum effect, the apricot seeds should be chewed raw and pulped in the mouth before swallowing. They should NOT be swallowed whole.**

**Note: Potatoes are high in carbohydrates which turns into glucose ( sugar ), use sparingly.**

"And God said, Behold, I have given you every herb bearing seed, which is upon the face of all the earth, and every tree, in the which is the fruit of a tree yielding seed; to you it shall be for meat. Genesis 1:29"

***Read about how Laetrile (B-17) is used as the chief anti-tumour agent.***

## Background info

Dr. Ernest T. Krebs, Jr. is the biochemist and researcher who first isolated Laetrile (vitamin B-17) in apricot seeds and also discovered B-15 (pangamic acid, a vitamin which has been proven to be an important adjunctive therapy in the treatment of illnesses related to circulation).

After years of study and testing he was convinced of the theraputic value of Laetrile. To prove that it was not toxic to humans he injected it into his own arm. As he predicted, there were no harmful or distressing side effects. The Laetrile had no harmful effect on normal cells but was deadly to cancer cells.
